

Transparent LAN Services

Streamline your LAN-to-LAN connectivity — and manage applications more efficiently and cost-effectively

If your business needs to share vast amounts of information and communicate with one or more locations, then you should consider Verizon Transparent LAN services (TLS).

Transparent LAN services is a turnkey solution specifically tailored to satisfy the LAN interconnection requirements of your business.

Verizon will place a LAN extension device on your premises that will connect your LAN to Transparent LAN services. So your multi-location business can stay connected without the need to purchase additional Customer Premises Equipment (CPE).¹

The connection you can count on

Transparent LAN services from Verizon utilizes a high-speed, fiber-based backbone to provide LAN interconnection at native LAN speeds, which increases throughput and allows your business to take advantage of these additional benefits:

- **Standard Customer Interface:** Transparent LAN services from Verizon conform to standard interfaces, including Ethernet 802.3z (Gigabit Ethernet), Ethernet 802.3u (Fast Ethernet), Ethernet 802.3 (10M Ethernet) and Token Ring 802.5 (16M Token Ring).
- **Private and Secure Transmission:** Specialized screening software ensures the reliable and secure transmission of your most critical and sensitive data.

■ 24/7 Network Monitoring and Maintenance:

We monitor your network from one central location, ensuring faster trouble-shooting and repair — so you won't need to divert vital resources from your core business.

- **Expandability:** Your business can easily add new locations to the network without any service interruption.

- **Affordability:** A low, flat fee and no per-use charges provide maximum cost-efficiency and simplify your communications budgeting.

Typical applications

- Information sharing and communication with one or more other locations
- Common database sharing
- Centralized file servers
- Database duplication
- Archiving
- E-mail
- Image transfer
